Imerys Graphite & Carbon
TIMREX® Natural Flake Graphite

Range of products and characteristics
• Flake graphite
• Purified graphite
• Expanded graphite
• Coarse, medium, fine, ultra fine
• High crystallinity
• High purity

Our Graphite Mines and Processing Plants

Imerys Graphite and Carbon’s fully owned natural graphite mines and processing plants are located in Canada, Namibia and Japan. In Canada, our facilities include two different locations: Lac-des-Îles, with the graphite mine and processing plant; Terrebonne, with a graphite re-processing plant, for the production of expanded graphite and ultra-fine grades. Our operations in Otjiwarongo, Namibia, include a flake graphite mine with high quality ore similar to our Canadian mine, with abounding natural crystalline flake graphite, easy to extract, process and deliver. The processing facilities in Namibia have been designed following our Canadian expertise and best-practices. In Japan, our Kitakyushu manufacturing plant uses coating technology for the production of anode materials from natural graphite, complementing our wide portfolio and enhancing our offer in the electrical vehicles and energy storage markets. Our quality solutions have a broad range of applications in mobile energy, engineering materials, polymers, as well as refractories and metallurgy.

About Imerys Graphite & Carbon

Imerys Graphite & Carbon, member of Imerys Group, is the reference for innovative capability in the field of carbon powder-based solutions: natural graphite and synthetic graphite powders, conductive carbon blacks, as well as water dispersions. High standards in terms of employees’ health and safety, social behaviour and environmental responsibility are core values of the company. Imerys Graphite & Carbon is capturing opportunities by developing new products and applications, investing in assets & people, and growing its commercial presence worldwide.
